

Can the price of solar panels fall further

Overview

In the early 2000s, the cost of solar panels was around ₹300 per watt. By 2023, prices have dropped to approximately ₹15 to ₹25 per watt, driven by improvements in technology, economies of scale, and increased competition.

In the early 2000s, the cost of solar panels was around ₹300 per watt. By 2023, prices have dropped to approximately ₹15 to ₹25 per watt, driven by improvements in technology, economies of scale, and increased competition.

EnergySage has released its 20th semiannual report, showing that residential solar panel prices hit an all-time low in 2024. Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30%.

Over the last 10–15 years, solar energy has gone from niche to mainstream. With that, the price of solar panels has fallen dramatically—more than 70% since 2010. What caused the drop?

But since 2020, things have been a little different. While costs are still relatively low, prices have flattened.

Solar panel prices in India have dramatically declined over the past few decades. In the early 2000s, the cost of solar panels was around ₹300 per watt. By 2023, prices have dropped to approximately ₹15 to ₹25 per watt, driven by improvements in technology, economies of scale, and increased.
