China plans to construct over 4.5 million 5G base stations in 2025 while introducing additional policy and financial incentives to support industries expected to shape the next decade, the country's Ministry of Industry and Information Technology (MIIT) announced during its annual work conference.

Base stations are responsible for transmitting and receiving radio signals to and from mobile devices within their coverage area. They convert the radio signals into electrical signals that can be processed by the core network and vice versa. Base stations come in various types, including macro.
