

Communication green base station equipment lightning protection grounding

Overview

The protection of GSM and base station towers from lightning and overvoltage is provided by integrating external lightning systems, internal lightning systems, earthing, equipotential bonding and LV surge arrester protection techniques within the framework of IEC-62305 standard.

The protection of GSM and base station towers from lightning and overvoltage is provided by integrating external lightning systems, internal lightning systems, earthing, equipotential bonding and LV surge arrester protection techniques within the framework of IEC-62305 standard.

A complete lightning current is discharged through the following paths: The magnitude of the lightning current GB50057-94 (2000 Edition) YD/T 5098-2001 Suggestion: Enter the building/station power supply B level. The protection should use 10/350 μ s waveform surge protective device. Multi-level.

Does a lightning arrester protect a telecommunication station?

Lightning protection (strikes with indirect effects) for telecommunication stations by lightning arresters, is applicable for all electrical networks. It is also compulsory to provide protection against lightning strikes with direct.

ERICO® has complete telecommunications applications solutions to help protect the facility against electrical noise, lightning induced surges and transients caused by switching components in the power systems. ERICO solutions include ERITECH® ground rods, ground mats, ground enhancing material.

Recommendation ITU-T K.112 provides a set of practical procedures related to the lightning protection, earthing and bonding of radio base stations (RBSs). It considers two types of RBS: those that are stand-alone installations, comprising a tower and the associated equipment and those that are.

This section describes the lightning protection and grounding requirements. Ensure that the equipment room meets the requirements because lightning is one of the major factors that causes damage to the USG. Table 6-7 lists the lightning protection and grounding requirements.

How are base stations protected from lightning strikes?

1. Grounding Grid and Ground Busbars In base station lightning protection design, the grounding grid and ground busbars are key components. With proper design, they can effectively reduce the impact of lightning on the station. 2. Base Station.
