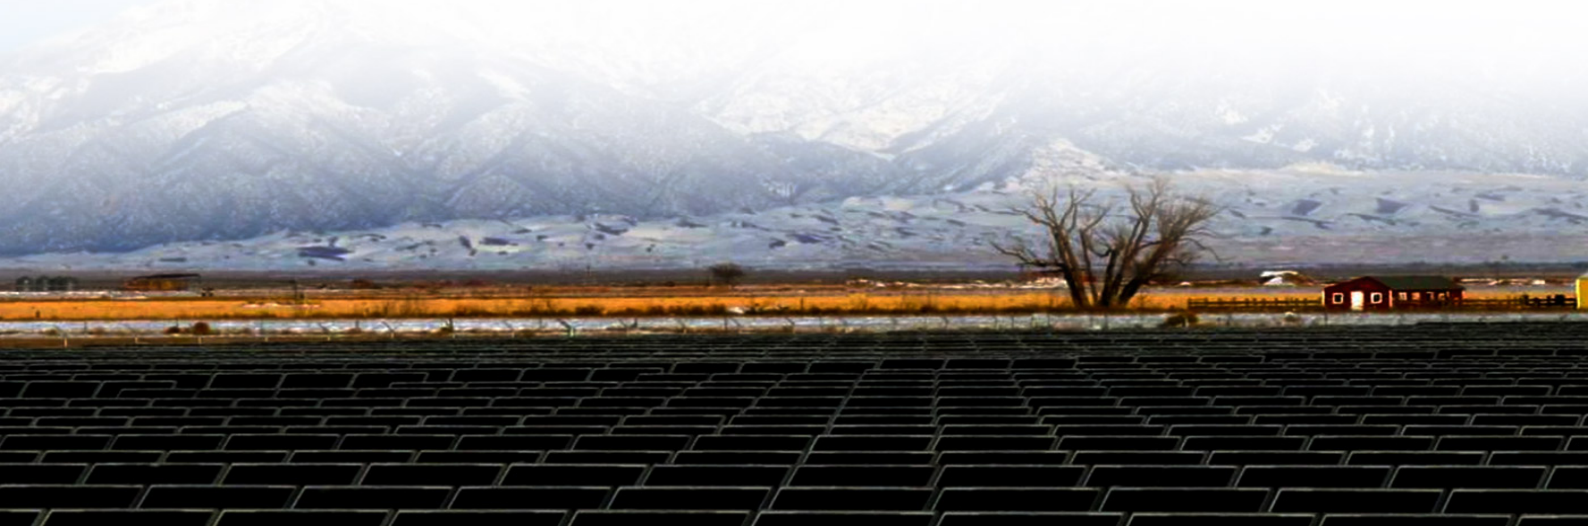
Croatia Container Group solar



Overview

By the end of 2024, Croatia had reached 3.8 GW of installed renewable energy capacity, with solar energy doubling its figures in one year. By 2025, photovoltaic power is expected to exceed 1 GW. However, structural and legal challenges remain, hindering the sector's momentum.

By the end of 2024, Croatia had reached 3.8 GW of installed renewable energy capacity, with solar energy doubling its figures in one year. By 2025, photovoltaic power is expected to exceed 1 GW. However, structural and legal challenges remain, hindering the sector's momentum.

Croatia is expected to surpass 1 GW of solar power by 2025, driven by a significant increase in installations and supportive policies. The expansion is part of the country’s broader commitment to renewable energy and aligns with EU targets to boost the share of renewables in electricity generation.

In 2025, Croatia achieved a significant milestone by surpassing 1 GW of installed solar capacity, marking a pivotal moment in the country’s renewable energy journey. This accomplishment underscores the important role solar energy plays in Croatia’s transition to renewable sources, as the nation.

Croatia’s solar market continues to grow steadily, led by the self-supply and commercial and industrial (C&I) segments, while regulatory barriers stall utility-scale development. Croatia’s cumulative solar capacity reached 1,099 MW at the end of June 2025, according to figures from the Renewable.

By June 2025, Croatia’s cumulative solar capacity reached 1,099 MW, as reported by the Renewable Energy Sources of Croatia Association (RES Croatia). This includes 980 MW connected to the distribution grid and 119 MW to the transmission grid, accounting for 5.4% of the country’s total electricity.

At the end of November 2024, Croatia had 25,406 solar power plants on the distribution grid, with a total capacity of 776 MW. The country achieved growth of 60% since the end of 2023 in both the number of photovoltaic plants and their capacity. Great interest in installing solar power plants for.

Croatia’s cumulative solar capacity reached 1,099 MW at the end of June 2025,

according to figures from the Renewable Energy Sources of Croatia Association (RES Croatia). The total figure consists of 980 MW connected to the distribution grid and 119 MW to the transmission grid. At the end of June.
