

# Cuba Sunshine Energy Storage Power

## Overview

---

The plan aims for one thousand megawatts of solar energy by 2025, but without installed batteries, which prevents meeting nighttime demand and limits its effectiveness against persistent blackouts.

The plan aims for one thousand megawatts of solar energy by 2025, but without installed batteries, which prevents meeting nighttime demand and limits its effectiveness against persistent blackouts.

The plan aims for one thousand megawatts of solar energy by 2025, but without installed batteries, which prevents meeting nighttime demand and limits its effectiveness against persistent blackouts. The Cuban government announced that it plans to incorporate one thousand megawatts (MW) of solar.

Yet Cuba's power outages increased by 23% in 2023 despite adding 450MW solar capacity. What's really going wrong?

Cuba currently operates 186 renewable parks generating 25% of its electricity. But here's the kicker – less than 15% have proper energy storage systems. "We're basically throwing away.

On Saturday, Cuba initiated the installation of solar energy storage batteries at four electrical substations, marking a significant step in addressing its energy challenges. These Battery Energy Storage Systems (BESS), also referred to as "concentrator units," are being placed at Cueto 220, Bayamo.

Is Cuba's energy infrastructure in a precarious state of aging and disrepair?

The report highlights the issue that not only is Cuba's energy infrastructure in a precarious state of aging and disrepair, but also that its entire energy system relies heavily on external aid and imported fossil fuels.

The dire state of Cuba's power generation infrastructure, largely dependent on oil from Venezuela, has seen the country of 10 million people struggle with near daily outages in some regions in recent months. Not far from the ruins of an unfinished nuclear power plant in the Cuban province of.

The Cabaiguán photovoltaic park, with a capacity of 21.87 MW, located in the central province of Sancti Spíritus, began operations after just over two months of installation. This is part of Cuba's national plan that calls for the construction of 55 solar parks by 2025, each with a capacity of 21.8.
