

EU solar Power Plant System

Overview

How much solar capacity does the EU have?

Since then, the European Union's solar capacity surpassed 100 GW in 2018 and reached the 200 GW milestone in 2022. It exceeded 260 GW in 2023, and the growth trend is only expected to continue. The EU cumulative PV capacity projections between 2024 and 2028 show double-digit growth rates year-on-year.

Does the EU solar sector continue to grow?

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, and the technology's central role in the continent's clean energy transition. Source: eepowerschool.com.

How much solar power will the EU have by 2024?

By the end of 2024, the total installed PV capacity in the EU is expected to exceed 260 GW, driven by favorable policies, corporate investments, and increasing energy independence strategies. This report ranks the 27 EU member states based on their total installed solar capacity at the end of 2024 and outlines their expected growth trajectories.

What is the solar energy landscape in Europe?

The solar energy landscape in Europe has rapidly evolved, positioning the continent as a significant player in global renewable energy production. As of 2023, the European Union (EU) boasts a total installed solar capacity of approximately 263 gigawatts (GW), making it the second-highest region in the world for solar power capacity.

EU solar Power Plant System

EU solar installations hit 65.5 GW in 2024, says SolarPower Europe

Solar installations grew 4% year on year in the European Union in 2024, down sharply from 53% growth in 2023. The slowdown coincides with a decline in solar investment, ...
