

Energy storage project boom

Overview

US battery storage hits record 5.6 GW in Q2 2025, led by utility-scale growth, but sourcing rules may slow future gains.

US battery storage hits record 5.6 GW in Q2 2025, led by utility-scale growth, but sourcing rules may slow future gains.

The US battery storage market just had its biggest quarter ever. In Q2 2025, a record 5.6 gigawatts (GW) of new capacity came online, according to the latest US Energy Storage Monitor report from the American Clean Power Association (ACP) and Wood Mackenzie. Most of that Q2 growth came from.

storage projects. This investment is expected to create 350,000 jobs by 2030. Through this investment, the industry is committed to supporting American battery manufacturing leadership, ensuring low-cost affordable electricity to fuel economic growth and American energy dominance. A pro-business.

Global energy storage additions are on track to set another record in 2025 with the two largest markets – China and US – overcoming adverse policy shifts and tariff turmoil. Annual deployments are also set to scale in Germany, the UK, Australia, Canada, Saudi Arabia and Sub-Saharan Africa, driven.

California, Arizona, and Nevada are building multi-gigawatt systems designed to absorb excess solar power and discharge during evening peaks. Texas continues to scale hybrid solar-plus-storage projects that stabilize ERCOT's grid during high-demand hours. New York and Massachusetts are expanding.
