The right combination of high-side and low-side bridge topology can ensure low power dissipation, high current carrying and gate-control benefits of IGBTs. Even the many varieties of advanced power devices available, choosing the right power device for an application can be a daunting task. For

IGBT modules made by Littelfuse ensure highly efficient high-speed switching by combining metal-oxide-semiconductor field effect transistors (MOSFETs) with bipolar junction transistors (BJTs). The compact insulated gate bipolar transistor modules offer several design and performance benefits.

TF series IGBT solar panel inverter features: 1. The chassis is thick, resistant to falling, shockproof and not easily deformed. 2. Only Tanfon solar produce 5kw model IGBT inverter in China --- IGBT model: Japan Mitsubishi 3. The process is good, the wiring is complete, the circuit board wire.
