

German solar energy storage power station

Overview

Statkraft, thought to be Europe's largest producer of renewable energy, has commissioned Germany's largest solar battery storage hybrid power plant under the country's Renewable Energy Sources Act. The €45 million plant was built on 41 hectares at a former gravel pit near the city.

Statkraft, thought to be Europe's largest producer of renewable energy, has commissioned Germany's largest solar battery storage hybrid power plant under the country's Renewable Energy Sources Act. The €45 million plant was built on 41 hectares at a former gravel pit near the city.

Zerbst, Germany / Oslo, Norway, 12 November 2025 – Statkraft, Europe's largest producer of renewable energy, today commissioned Germany's largest solar battery storage hybrid power plant under the Renewable Energy Sources Act (EEG). "With the Zerbst solar park, we have implemented a major energy.

Statkraft, thought to be Europe's largest producer of renewable energy, has commissioned Germany's largest solar battery storage hybrid power plant under the country's Renewable Energy Sources Act. The €45 million plant was built on 41 hectares at a former gravel pit near the city of Zerbst/Anhalt.

Norwegian state-owned utility Statkraft AS has commissioned the Zerbst solar-plus-storage project in Saxony-Anhalt, Germany, which combines 46.4 MW of power-generating capacity with a 16-MW/57-MWh battery. Solar farm. Author: Martina Markosyan Estimated at EUR 45 million (USD 52.0m), the hybrid.

This integrated PV-storage project is a key driver of Germany's renewable energy transition. It combines high-efficiency solar power generation with large-capacity energy storage, storing surplus solar electricity during peak production hours and supplying power during high-demand periods or.

Significant storage capacities are necessary to unlock the full potential of renewables — offering a great opportunity for infrastructure investors. Germany is making progress in its transition to renewable energy: In the first half of 2024, 61.5% of electricity was generated from renewable sources.
