

India s new energy storage is selected as a future industry

Overview

India's energy storage sector is still emerging, but growth and planning are rapid. Today, pumped hydro storage provides most bulk storage (existing projects total only a few gigawatts and hundreds of megawatt-hours), while grid-scale batteries are just beginning to roll out.

India's energy storage sector is still emerging, but growth and planning are rapid. Today, pumped hydro storage provides most bulk storage (existing projects total only a few gigawatts and hundreds of megawatt-hours), while grid-scale batteries are just beginning to roll out.

India's renewable energy push crossed a psychological and structural milestone in 2025, with record capacity additions of 44.5 GW (till November 2025) — nearly doubling annual additions, deepening domestic manufacturing, and marking a clearer shift from “energy transition” to “energy acceleration.”.

India has emerged as a leader in clean energy within the G20. In fact, India became the first G20 country to meet its Paris Agreement commitments, and it has set an ambitious target of 500 gigawatts (GW) of renewable capacity by 2030. To reach this goal, India's renewable power fleet has grown.

India stands at a pivotal moment in its energy journey. We are committed to transforming our energy landscape, balancing environmental responsibility with economic growth and energy access for all. Guided by our National Electricity Plan and bold climate pledges, we aim to achieve 500 GW of.

ity to at least 500 GW by 2030. The country's cumulative renewable energy capacity totals to 209.4 GW as of December 2024, With solar energy contributing 47% of the capacity, followed by wind energy (23%) & Large hydro Projects (22%), and the rest being generated through Bio Power (5% d to grid).

In the next five years, technologies like energy storage and green hydrogen would fundamentally reshape India's renewable energy ecosystem, a top executive said. “Storage will be a game changer in addressing intermittency, enabling renewables to deliver firm, dispatchable power. We are already.

India has become a G20 clean energy leader. India even became the first G20

nation to fulfill its Paris Agreement pledges, and it's aimed at a bold goal of 500 gigawatts (GW) of renewable capacity by 2030. To achieve that, India's fleet of renewable power has expanded exponentially. Installed.
