

Kazakhstan solar air conditioning

Overview

Is solar energy a viable energy source in Kazakhstan?

In 2019, another solar power plant in Kazakhstan, Saran, with a capacity of 100 MW started its operation in the Karaganda region (Satubaldina, 2020). According to the International Energy Agency (IEA), within the period of 40 years, solar energy has a potential to meet about 20-25% of the energy demand of the country.

Is Kazakhstan a good place to install solar power plants?

At least 50% of the territory of Kazakhstan is suitable for installing solar power plants (Antonov, 2014). However, up until recently, solar resources of the country were not being used for power generation. Kazakhstan is developing solar energy technologies, namely production of photovoltaic modules using local silicon.

What is Kazakhstan's energy sector?

Kazakhstan's energy sector is an important element of the economy, which heavily relies on abundant fossil fuel resources, including oil, gas, and coal, while also possessing significant solar, wind potential and uranium deposits. The Kazakhstan's current energy infrastructure shape is rooted in Soviet time and advanced in independence era.

How can Kazakhstan achieve its ambitious climate and energy goals?

By implementing informed policy measures, engaging in transparent public dialogue, and adhering to international safety standards, Kazakhstan can harness the potential of energy power sector to achieve its ambitious climate and energy goals.
