

# Niamey s new solar panels

## Overview

---

As of September 2021, Niger's national generation capacity was reported as 284 megawatts, all of it derived from expensive "fossil fuels". The national electrification rate was 18.8 percent, in 2019, with the government of Niger aiming to raise that rate to 80 percent by 2035, with 30 percent of generating capacity derived from renewable sources. The Gorou Banda Solar Plant represents the first grid-ready renewable energy source in the co.

Niger is taking significant strides to address its energy challenges, as new solar projects begin to transform the landscapes of Niamey and Zinder. These initiatives aim to reduce the country's dependence on electricity imports from Nigeria, marking a pivotal shift toward energy self-sufficiency.

The Gourou Banda Solar Power Station is a 50 MW (67,000 hp) solar power plant under construction in Niger. This renewable energy infrastructure project is under development by an independent power producer (IPP), under the build-own-operate-transfer (BOOT) model, with support from the International.
