Then, iterative theory verifies the selection of models, aiming to promote the construction of electric vehicle charging pile facilities. The experiments simulation result shows that under certain facility schemes, genetic algorithms' accuracy and selection time for business model selection are.

age charging piles" charging and discharging. According to Fig. 1, the system monitoring center aims to minimize the cost of charging and discharging electric vehicles while maximizing t (DC) charging pile, known as "fast chargers." Section I: Principles and Structure of AC Charging Pile AC.

The traditional charging pile management system usually only focuses on the basic charging function, which has problems such as single system function, poor user experience, and inconvenient management. In this paper, the battery energy storage technology is applied to the traditional EV (electric.
