I don't know if the WF-5220 is a particularly stellar unit but it does eliminate the need to buy and wire an automatic transfer switch. It passes through shore power when available, or supplies 120v from the inverter if switched on. Very straight forward to connect and get me the functionality of.

An inverter uses electronic signal processing circuitry and transformers to bump the 12 volts up to 120 volts and change the DC current into AC current. The electronic circuitry does create the proper frequency and voltage levels that make up the waveform of the output current so while the inverter.
