Wanted to market your Automatic Reset Circuit Breakers.

How do you reset a tripped breaker?

To properly reset a “tripped” circuit breaker, one has to firmly push the breaker to the “off position” and then turn the breaker back to the “on” position. A properly reset breaker will typically “snap” into place when returned to the “on” position. Is it safe.

A circuit breaker is a safety device that automatically switches off electrical power when it detects a fault or overload in an electrical circuit. It is a critical component in any electrical system as it helps to prevent electrical fires, electrocution, and damage to electrical equipment. In this.
