This app note describes how the AnalogPAK SLG47004 can be used as the core of a sine wave-based inverter useful for automotive and renewable energies application. It describes the implemented logic, AnalogPAKs configuration and the obtained results of a highly integrated inverter. 1. References.

This application note describes the design principles and the circuit operation of the 800VA pure Sine Wave Inverter. The pure Sine Wave inverter has various applications because of its key advantages such as operation with very low harmonic distortion and clean power like utility-supplied.

Three phase off-grid inverter is driven using Sine PWM. The sine references are

generated using a Harmonic oscillator. The closed loop control is implemented in synchronous reference frame, by converting three phase quantities in d-q synchronous reference frame. The inverter is fed by a dc source.
