

# Solar air conditioners on Western European islands are all

## Overview

---

A group of researchers from five countries has surveyed and analyzed over 50 solar-powered cooling projects in different climatic zones. The paper presents a short overview on the state-of-the-art and potential of solar-assisted cooling and air conditioning .

A group of researchers from five countries has surveyed and analyzed over 50 solar-powered cooling projects in different climatic zones. The paper presents a short overview on the state-of-the-art and potential of solar-assisted cooling and air conditioning .

Solar air conditioning, or "solar-powered air conditioning", refers to any air conditioning (cooling) system that uses solar power. This can be done through passive solar design, solar thermal energy conversion, and photovoltaic conversion (sunlight to electricity). The U.S. Energy Independence and

Summer air conditioning represents a growing market in buildings worldwide, with a particularly significant growth rate observed in European commercial and residential buildings. Heat-driven cooling technologies are available, which can be used in combination with solar thermal collectors to.

In a coastal house on one of the North Aegean islands, two hybrid solar air conditioners (DC inverter units with direct PV input) were installed in 2025. The setup includes 6 rooftop solar panels (3 for each unit) feeding the compressors preferentially, with smart algorithms handling seamless.

With air conditioning in only 20% of the Europe's buildings, city leaders face a pressing dilemma: how to keep people cool without worsening the climate crisis driving rising temperatures in the first place. The cycle of rising heat, greater demand for cooling and growing emissions can be broken.

Right now, record-breaking temperatures across Europe are driving seasonal spikes in demand for air conditioning. Until recently, Europe's market for air conditioning (AC) remained muted. While 90% of US homes have AC units, the figure is just 20% in European homes according to the International.
