

# Solar panels have the same voltage but different wattages

## Overview

---

When panels have different wattages but the same voltage, they work much better together in parallel. For series connections, panels with the same current (even if wattages differ) work best together. Connect similar panels in the same string before connecting different strings.

When panels have different wattages but the same voltage, they work much better together in parallel. For series connections, panels with the same current (even if wattages differ) work best together. Connect similar panels in the same string before connecting different strings.

Yes, you can mix solar panels with different wattages—but there's a catch." Explore the electrical science behind mixing panels, learn which connection methods work best, and discover the technologies that can help your mixed-panel system perform at near-perfect efficiency. Ever wondered if you can.

The most asked question related to the power is whether mixing different wattage solar panels is possible. After addressing this question, we have come to various things which are shared in this article. Is Mixing Different Wattage Solar Panels Possible?

Let us understand the concept with the help.

When your panels have the same current but different voltage, you need to wire your panels in series. This is because the voltage gets added up, while the current stays the same. You can see this in the following diagram. When your panels have the same voltage but different current, you need to.

Wiring solar panels in series adds their voltages while their amperages stay the same. Wiring solar panels in parallel adds their amperages while their voltages stay the same. How Does Wiring Solar Panels In Parallel Affect it's Volts & Amps?

Here we see four - 100w solar panels wired in parallel.

Simply put: yes, you can mix and match solar panels with different wattages. Although it's not recommended, it's not prohibited and you can do so at your leisure. Note: To get the maximum efficiency from your system and keep your

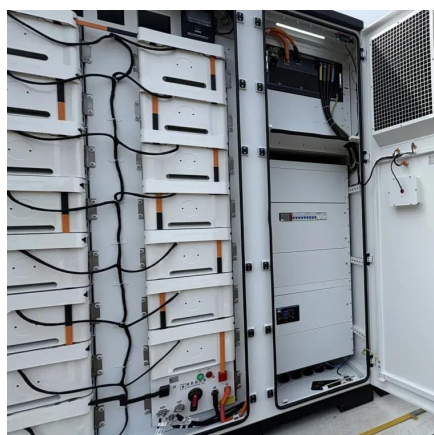

100W panel, you should get an additional controller for your new.

Mixing solar panels of various voltage or wattage, or produced by different manufacturers, is a frequently asked question by most DIYers. Though mixing different solar panels is not recommended, it's not forbidden and things would be ok as long as each panel's electrical parameters (voltage.

## Solar panels have the same voltage but different wattages

### [Can I Use Solar Panels of Different Wattage?](#)

Solar panels of different watts should not be used together because they have different voltages and amps. The system will always choose the lowest voltage or amp, which will reduce ...
