

When will Costa Rica s new energy storage policy be released

Overview

Costa Rica released its National Green Hydrogen Strategy in 2023 (MINAE, 2022a). With a potential production capacity of up to six million tonnes per year, green hydrogen could be used to satisfy industry, agriculture and energy needs in Costa Rica, as well as become an important.

ICLG - Renewable Energy Laws and Regulations - Costa Rica Chapter covers common issues in renewable energy laws and regulations – including the renewable energy market, sale of renewable energy and financial incentives, consents and permits, and storage. 1. Overview of the Renewable Energy Sector.

With currently implemented policies, Costa Rica's emission levels could reach between 13.2 and 15.8 MtCO₂e/year in 2030. This represents an increase between 2% below and 18% above 2010 levels (excl. LULUCF). Costa Rica's emissions up to 2021 have continued to increase and reached 15.8 MtCO₂e.

Costa Rica's energy policy aims to move from a fossil fuels based energy system towards renewable energy sources and to expand its power generation capacity, replacing old power generating stations and developing new projects. How will renewables affect Costa Rica's energy system?

Both renewable.

Costa Rica is at the forefront of promoting a sustainable future. In 2020, almost all its energy, 99.78%, came from renewable sources. Still, the use of solar energy remains low, at under 1%. This brings up a key question: What drives Costa Rica's push for renewable energy, and how does this help. Does Costa Rica have a fossil fuel moratorium?

Most of Costa Rica's electricity comes from renewable sources, but in the past year a notable share of thermal energy (from burning fossil fuels) has been used to compensate for reduced hydropower production due to drought. Efforts to enshrine the fossil fuel moratorium into law have also faced challenges during the legislative process.

Will Costa Rica introduce transition fuels to its energy mix?

The bill would allow RECOPE, the state-owned petroleum refinery, to introduce transition fuels into its energy mix, including imported natural gas (Asamblea Legislativa de la República de Costa Rica, no date; Colindres Lagos, 2024). The proposed bill notably excludes synthetic fuels not derived from biomass, such as green hydrogen (Dobles, 2024).

Is Costa Rica a renewable country?

Costa Rica's electricity mix has been more than 98% renewable since 2015 (Camarillo, 2022). In 2021, the country managed a full-year renewable generation rate of 99.98% (EFE, 2021). However, the share of fossil electricity production has dramatically increased in recent months.

Why does Costa Rica have a low electricity production rate in 2023?

In 2023, electricity production from renewables dropped to 95% in 2023, and only 91% of electricity demand was met using renewable sources in the same period (DOCSE, 2024a). This is primarily attributed to drought conditions affecting hydropower production, which makes up about two-thirds of Costa Rica's renewable generation (Webb, 2024).

When will Costa Rica s new energy storage policy be released
